ABSTRACT OF THE INVENTION

The invention relates to a novel emulsified composition containing (a) major amount of an aqueous phase, (b) a minor amount of an organic phase (c) a thickener
5 and (d) a minor but effective amount of at least one emulsifier to emulsify the aqueous and organic phase resulting in a water in oil emulsified composition, in particular emulsified greases and emulsified coatings. Further, the present invention provides a process for making the emulsified composition.
